- Manufactured with Microstop™ that inhibits growth of bacteria and fungi and prevents odor absorption.
- Won't crack, splinter, swell, or absorb liquids.
- Available in several standard sizes, with custom sizes available. [Get a quote here](#)

Description

NoTrax Sani-Tuff® rubber cutting boards with juice grooves, T45 are made from a high-density rubber compound that won't crack, splinter, swell or absorb liquids or odors. The boards feature a soft finish that

doesn't dull knives or provide unwanted bounce back, and last far longer than cutting boards made from wood or plastic.

Sani-Tuff professional-grade cutting boards with grooves are tested and certified by NSF International. The rubber compound used for these cutting boards has a high degree of resiliency preserving knife blades longer. The convenient cutting board juice groove makes these boards a great choice for many uses, including meat carving stations and professional kitchens.

Manufactured with Microstop™ anti-microbial rubber compound, the cutting board with groove inhibits bacterial and fungal growth to keep the board sanitary.

([Maintenance is easy as well](#). Rubber provides a level of self-healing for minor nicks and scratches. For deeper cuts, it can easily be resurfaced by sanding the board. Unlike wooden cutting boards, it is easy to clean with no special oils or cleaners required. Sani-Tuff rubber cutting boards are not dishwasher safe and should be handwashed to ensure longevity.

We offer a full range of cutting boards to suit your needs, and this handy [guide](#) can help you select the best one for your requirements.

If you need a custom cutting board in a specific size, we can customize cutting boards with drip edges in various thicknesses and sizes to fit your needs. Just let us know your requirements request a quote [here](#).
